PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience in mobile and web application development, specializing in Flutter, Kotlin, and API integrations. Proven track record in building apps for Android POS terminal systems, fintech solutions, and scalable platforms that enhance compliance, accessibility, and user experience. Skilled in implementing AI-driven automations and workflow orchestration using n8n to streamline business processes and optimize system efficiency. Passionate about creating intuitive, high-impact solutions that drive innovation, automation, and growth across diverse industries..

SKILLS

- **Programming Languages & Tools:** Kotlin • Python • Dart • JavaScript
- **Frameworks/Libraries:** Flutter • React • Flask • Next.js • Vue.js • Node.js
- **Databases:** Firebase • MySQL • Room • SQLite • Postgres • Supabase
- **Frameworks & Architectures:** JSON • Cross-Platform Development • Jetpack Compose • Dependency Injection • Clean Architecture • MVVM • REST API Integration
- **UI/UX Design:** Figma • Adobe Photoshop • Adobe Illustrator
- **Other Skills:** Git • Android SDK • GitHub • CI/CD • SEO Optimization • Postman • AI Automations (n8n)

WORK EXPERIENCE

Verido — Remote (London, UK) Nov 2025 – Present

Flutter Engineer

- Developed and integrated an AI-powered real-time voice agent using OpenAI Realtime APIs, enabling multilingual voice-based data capture and conversational interactions, improving sales workflow efficiency by 40%.
- Built an AI-driven analytics engine that processes transactional and operational data from backend services to generate insights on pricing, inventory, and customer engagement, improving operational decision-making efficiency by 15%.
- Resolved critical application access and stability issues, restoring platform reliability and increasing active user engagement by 100%.
- Redesigned and modernized the Flutter UI/UX, improving usability and increasing user retention by 10%.
- Led integration of backend services and third-party APIs, ensuring secure, scalable, and high-performance communication between the mobile application and external systems.
- Implemented an intelligent in-app update and notification system, reducing outdated app usage and lowering version fragmentation by 25%, while decreasing user-reported technical issues by 10%.
- Integrated Zipy performance monitoring and crash analytics, enabling real-time tracking of crashes and user sessions, reducing crash rates by 30% and improving mean time to resolution (MTTR) by 20%.
- Supported the deployment team with updating the version in Verido Playstore , Verido App Store and also writing tests.

ProDG Studio— Remote (London, UK) July 2025 - May 2026

Software Engineer(Contract)

- Contracted to **AIEnai** through ProDG Studio for bug fixing and version two development of their cross-platform app (available on App Store).
- Leveraged **Flutter** and **Firebase** to resolve critical issues and add new features, improving performance and user experience by over **70%**.

Stanbest Group EA Limited May 2024 - May 2026

Lead Mobile Engineer

- Spearheaded the development and Play Store launch of the iSale POS app, expanding accessibility from manual sharing to nationwide and global availability resulting in a 100% increase in customer acquisition.
- Developed and deployed the iSale Sales Management POS system with Kotlin, enabling 8% of Kenyan businesses to comply with KRA requirements.
- Resolved printing/report generation issues affecting 65% of clients across POS devices, rolled out firmware updates countywide.
- Enhanced system performance with pagination, improving scalability for high-volume businesses and resolving sales loading issues for 100% of OSCU clients..
- Configured and implemented a secure PIN management feature on PDQ devices, resolving access issues and improving user experience for 100% of clients.
- Revamped Stanbest Group's website into a single-window system for KRA and sales, boosting site performance by 85%.
- Collaborated on the design team to create Stanbest Figma prototypes for both the mobile app and website, later serving as the foundation for enhancing user interface (UI) and user experience (UX)
- Developed version two of the application using Flutter for cross-platform compatibility and an improved, intuitive user interface. Integrated additional functionalities to enhance accessibility and reporting, boosting client ease of use and overall experience by 90%.
- Integrated backend APIs built in Node.js and implemented handling of Kenya Revenue Authority (KRA) responses, ensuring clients were promptly informed of compliance updates and system challenges through the application..
- Solved credit note issues for both new and old app versions, enabling in-app processing without IT support or web portal reliance, 100% benefiting all iSale clients.

Suluhu Fintech-Remote May 2024 - Present

Android Engineer

- Contracted by **Tovu Sacco** to develop a goal-based savings Android application in **Kotlin**, including API integrations with **SasaPay** (used by ~83% of Kenyans), **MPESA**, and backend services.
- Contracted to bug fix **Wapi pay** admin dashboard and to make sure the user interface is responsive and user friendly improving ease of usability by 30 %

- Contracted by **Mwananchi Credit** to build a mobile application in **Flutter**, integrating payment systems, credit management, and reporting functionalities.
    - Successfully deployed and maintained the application on the Google Play Store, ensuring smooth release management, updates, and production readiness.
    - Implemented **SSL Certificate Pinning** to secure API communication, significantly strengthening protection against man-in-the-middle attacks and improving request security.
    - Implemented an intuitive **UI/UX experience**, improving usability and customer trust, contributing to an estimated **90% increase in user confidence and engagement**.
    - Integrated backend APIs and payment services, including M-PESA, enabling seamless loan applications, disbursements, and repayment workflows.

Polycrest Africa-Remote January 2025 - August 2025

Frontend Developer and Software Development Instructor

- Designed the user interface for the Polycrest website, enhancing user experience and accessibility while developing the website(Polycrest). This and other features like Search Engine Optimization helped boost the website performance by about 60% and its presence in the online space
- Taught software development courses, guiding students through coding principles, best practices, and real-world applications. Best practices which help my students have an easy time learning and also improves their productivity in programming by up to 70% while staying in terms with the latest trends.

Kenya Trade Network Agency May 2023 - August 2023

Intern

- Proposed migration to Kotlin and gained hands-on experience in Figma, Java, and mobile development.
- Collaborated with database admin on management concepts and compiled technical reports for supervisors.

VOLUNTEERING

Indie Games Group Kenya October 2023 - August 2025

Frontend Developer

- Revamped the IGGK platform using React, Next.js, and Tailwind CSS for a modern, responsive design, integrating Firebase for authentication, database, and real-time functionality, which improved performance by 60% and significantly boosted online presence.

GameTribe January 2025 - January 2026

Frontend Developer

- Redesigned and revamped the Gametribe website, improving user experience, accessibility, and overall performance by ~60% through optimized UI/UX and SEO enhancements.
- Developed and deployed a gifting system that enabled member donations and payouts based on points earned, seamlessly integrating MPESA, Stripe, and Flutterwave to streamline 100% of the payment, donation, and reward processes.

PROJECTS

- **Kile Kitabu (Play Store)** - Developed Kile Kitabu, a debt management app built with Kotlin and Firebase, enabling secure debt tracking, reporting, and communication. Integrated M-Pesa and SasaPay for seamless payments, with planned updates to include a Flask backend and additional features to enhance reliability and user experience.
- **AFRE360 (Play Store)** - Maintained Afre360, a platform that enables merchants and customers to seamlessly sell and purchase fuel, vehicle products, and pay fares. Contributed to integration management and UI enhancements using Flutter, and was responsible for deploying and maintaining app updates on both the Google Play Store and **Apple App Store**.

- **Ylearn(Play Store)** - Upgraded, redesigned, and developed version two of Ylearn by migrating its codebase from Java to Kotlin and overhauling the UI/UX with Figma for a more intuitive user experience. Integrated Gemini AI with text, image generation, and interpretation capabilities, as well as YouTube API to support interactive learning. These enhancements contributed to the adoption increase by 30% of the student population.
- **KESSHA Ticket Scanner** - Developed an Android application for the 48th KESSHA Annual Conference (2025) using Kotlin, integrating APIs to verify ticket validity. Optimized the system to reliably scan up to 20,000 tickets with 100% accuracy and seamless performance. Implemented an intelligent API failover mechanism, allowing automatic switch to a backup API in case of primary API failure, ensuring uninterrupted validation and system reliability.
- **Life Giving Ministries International** - Revamped the LifeGiving Ministries website, improving UI/UX for seamless navigation and boosting site performance by up to 80% through SEO optimization. Integrated secure Stripe payments for donations and resources, resulting in a 45% increase in online giving. Managed events, purchases, and activity data in MySQL, which enhanced event participation and strengthened community engagement.
- **MPESA-WITH-FLUTTER** - Built a Flutter-based demo app integrating M-Pesa payments, with real-time transaction status querying for instant user feedback. Implemented clean architecture to ensure reliability, security, and scalability across platforms. LinkedIn Post.
- **Kitoko Pay** - Developed the frontend of KitokoPay, a Flutter-based fintech application, translating Figma designs into production-ready code. Collaborated with the backend team on Java-based integrations to deliver seamless digital payment solutions.
- **Shop On** - Improved an existing e-commerce application inspired by Amazon, with a demo interface styled after LinkedIn. Enhanced UI concepts and localized features for the Kenyan market. Built in Kotlin with Firebase for data storage, the app integrates Augmented Reality (AR) to let customers virtually preview product size, fit, and color themes, effectively bridging the gap between customers and products.

- **CRUD APP** - Developed a mobile application for managing personal information, featuring account creation, profile management, and data display with seamless integration to a Python Flask and PostgreSQL backend for efficient CRUD operations via a RESTful API.

- **AFYA MKONONI** - Developed Afya Mkononi, a mobile health app with features like secure Firebase-based authentication, appointment booking, and real-time chat with healthcare providers, enhanced by OpenAI for intelligent user interactions; utilised Kotlin, XML, Retrofit, and machine learning for a comprehensive, user-friendly experience.

- **NeatFlix** - Android app built with Jetpack Compose, consuming TMDB API.

EDUCATION

Meru University of Science and Technology **November 2020 - October 2024**

- Bachelor's Degree in Computer Science (2nd Class Honours Upper Division).
- Roles: GDSC Android Lead, GDSC Co-Lead, Innovations Centre Chairman.
- Recognitions: Google Appreciation (Core Team Member), Google Solutions Challenge award.

Modcom Institute of technology **January 2020 - July 2020**

- Certificate in Mobile Software Development.

CERTIFICATIONS

UDEMY

- Flutter UI Bootcamp | Build beautiful apps using flutter - Certificate
- UI/UX Design Master Class with Adobe XD - Certificate Certificate 2
- Master Git and Github - Certificate
- Master the Art of Persuasive Pitch Deck Presentations - Certificate
